APURUPA PRATHIPATI

SENIOR JAVA FULL STACK & BACKEND DEVELOPER

Eden Prairie, Minnesota | apurupa810@gmail.com | 734-278-7599 | github.com/apurupa810-dotcom/apurupa-portfolio

PROFESSIONAL SUMMARY

Senior Java Full Stack Developer with 10+ years of experience building and supporting enterprise applications across banking, credit cards, retail, and telecommunications. Develops frontend features with Angular/AngularJS and React and backend services with Java/J2EE, Spring Boot, microservices, and REST APIs. Experience covers credit-card and payment workflows, fraud and debit disputes, telecom billing, SQL-backed application features, testing, releases, and production troubleshooting. Known for tracing issues across UI, service, integration, and database layers and communicating fixes with engineering and business teams. Project work includes Navy Federal, American Express, Little Caesars, and Cox Communications, including PCF-to-Azure AKS modernization and Angular-to-React migration.

TECHNICAL SKILLS

Languages: Java 8–21, JavaScript (ES6+), TypeScript, Python, SQL, PL/SQL, HTML5, CSS3; Kotlin (familiarity)

Java and Backend: Core Java, J2EE, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate/JPA, Spring Cloud, Spring Batch, microservices, REST APIs, SOAP, Node.js, Express.js

Frontend: Angular, AngularJS, React.js, React Hooks, Redux, Context API, RxJS, JavaScript/TypeScript, Gatsby.js, Storybook, GraphQL, Styled Components, MDX, SCSS, Bootstrap, Material UI, responsive UI and reusable components

Data and Integration: PostgreSQL, Oracle, MySQL, SQL Server, MongoDB, DynamoDB, Redis; MuleSoft Anypoint Platform, Mule 4, DataWeave, API Manager, Runtime Manager; Kafka, RabbitMQ, ActiveMQ, JMS, AWS SQS/SNS; batch processing

Cloud and Delivery: AWS (EC2, ECS/EKS, S3, Lambda, RDS, API Gateway, CloudWatch, VPC, IAM, CloudFront), Microsoft Azure (AKS, Azure Functions, Azure DevOps, Key Vault, Application Insights), PCF, Docker, Kubernetes, Helm

Build and Delivery: Git, GitHub, Maven, Gradle, Jenkins, AWS CodePipeline, Azure DevOps, GitHub Actions, Terraform, Jira, Confluence, IntelliJ IDEA, VS Code

Testing and Observability: JUnit, Mockito, Jest, React Testing Library, Cypress, Selenium, Jasmine, Karma, Protractor, Postman, Splunk, Kibana, Grafana, Application Insights, CloudWatch

Security: OAuth 2.0, OIDC, JWT, SAML, RBAC, secure API practices, PCI-DSS/PII-aware delivery

AI-assisted development: GitHub Copilot and AI-assisted development workflows; review and validate generated code

PROFESSIONAL EXPERIENCE

Navy Federal Credit Union | Vienna, VA | Apr 2021 – Present

Senior Full Stack Developer | Claims, Fraud, and Debit Disputes Platform

Environment: Java, Spring Boot, Angular, TypeScript, REST APIs, MuleSoft API integration, PostgreSQL, Redis, RabbitMQ, Kafka, PCF, Azure AKS, Azure Functions, Docker, Helm, Azure DevOps, IntelliJ IDEA

- Build Angular/TypeScript screens for claim intake, dispute questionnaires, validation, status tracking, alerts, and service interactions across claims, fraud, and debit-dispute workflows.
- Implement form behavior and client-side validations; connect screens to backend services, map request/response data, and handle service errors and user-facing states.
- Extend the dispute journey beyond single-item submissions by delivering multi-dispute claim flows and questionnaire pages for claim processing.
- Develop and maintain Spring Boot microservices and REST APIs for claim creation, business validation, dispute status, and communication with downstream banking systems.
- Write and optimize PostgreSQL queries and work with Redis-backed application flows; investigate data and service issues and support data validation across persistence and API layers.
- Develop and support claims batch-processing and documentation-generation workflows for case-processing teams; maintain technical designs, runbooks, and operational documentation.
- Contribute to MuleSoft API integrations and DataWeave payload transformations between claims services and downstream systems; troubleshoot connectivity, payload, and integration issues.
- Work with RabbitMQ/Kafka message flows and Azure Functions to support asynchronous processing; help investigate retries and downstream service behavior.
- Support migration of services from PCF/Tanzu to Azure Kubernetes Service (AKS), including Docker packaging, Helm/Kubernetes deployment configuration, and release validation.
- Use Azure DevOps pipelines for build, test, and deployment workflows; participate in integration testing, UAT support, and release verification.
- Contribute to chatbot and workflow-automation efforts supporting claims/fraud operations; review behavior and validate integration with the application environment.
- Analyze defects across UI, APIs, integrations, and data; support root-cause analysis, code reviews, technical documentation, and coordination with product, QA, and DevOps teams.

Little Caesars | Detroit, MI | Sep 2020 – Mar 2021

Full Stack Developer | Digital Ordering and Web Experiences

Environment: Java, Spring Boot, React, Gatsby, JavaScript, TypeScript, Storybook, Styled Components, MDX, GraphQL, REST APIs, PostgreSQL, Redis, AWS, Git, Yarn, Lerna, Jest, React Testing Library, JUnit, Mockito, Cypress

- Built responsive React/Gatsby pages and customer-facing digital-ordering experiences using shared layouts, reusable UI components, and modern JavaScript/TypeScript.
- Created and documented reusable frontend components with Storybook, Styled Components, and MDX to support consistent UI implementation across features.
- Contributed to Java/Spring Boot backend functionality and REST service integration supporting digital-ordering application workflows.
- Integrated React/Gatsby pages with GraphQL and REST endpoints; retrieved backend data and mapped responses into customer-facing ordering views.
- Worked with PostgreSQL and Redis-backed application data flows and coordinated UI/API behavior with the service layer.
- Wrote and maintained automated tests across UI and service changes using Jest, React Testing Library, Cypress, JUnit, and Mockito; investigated defects with QA and engineering.
- Supported AWS application delivery and release workflows using EC2, ECS, S3, CloudFront, RDS, Lambda, and CloudWatch.
- Used Git, Yarn, and Lerna in the development workflow; participated in code reviews, Agile ceremonies, and cross-functional defect resolution.

American Express | New York, NY | May 2018 – Aug 2020

Full Stack Developer | Credit Card Applications

Environment: Java, Spring Boot, REST APIs, Angular, React, TypeScript, Node.js/Express, Kafka, AWS EC2/ECS/EKS/S3/Lambda/RDS/API Gateway/CloudWatch, VPC, IAM, PostgreSQL, OAuth 2.0/JWT, Jenkins, AWS CodePipeline

- Contributed to migrating credit-card application workflows from Angular to React/TypeScript; built reusable components and connected migrated screens to backend APIs.
- Developed customer-facing views for card accounts, transactions, statements, payment activity, alerts, and disputes; connected UI workflows to backend APIs and handled response, validation, and error states.
- Built and maintained Java/Spring Boot services and REST APIs that connected web applications with backend and enterprise systems.
- Developed a Node.js/Express backend-for-frontend layer to aggregate service data and shape API responses for React and Angular web experiences.
- Supported Kafka event processing for transaction-related updates so downstream services could process events asynchronously alongside synchronous API requests.
- Worked with PostgreSQL-backed features and AWS-hosted application components, including EC2, ECS/EKS, S3, Lambda, RDS, API Gateway, and CloudWatch; supported operational use of VPC and IAM controls.
- Implemented and supported Spring Security, OAuth 2.0, and JWT patterns; contributed unit/integration testing and code reviews for application changes.
- Participated in code merges, Jenkins/AWS CodePipeline releases, deployment checks, post-release validation, defect triage, and production troubleshooting.

Cox Communications | Hyderabad, India | Jun 2013 – Dec 2015

Full Stack Developer | Telecom Customer and Billing Applications

Environment: Java, Spring MVC, AngularJS, JavaScript, HTML, CSS, REST APIs, SQL/PL-SQL, Jenkins, Selenium, Jasmine, Karma, Protractor

- Developed and maintained AngularJS/JavaScript interfaces for telecom billing, account-management, and customer-service workflows using HTML and CSS.
- Connected browser screens to REST services and relational data; handled workflow behavior and investigated UI-to-service issues.
- Implemented Spring MVC controller, service, and data-access functionality for enterprise web applications.
- Built and maintained application integrations around REST APIs, supporting communication between the browser, Java services, and data sources.
- Wrote and maintained SQL/PL-SQL queries; traced telecom billing and account-workflow defects across AngularJS screens, Java services, REST APIs, and relational data, supporting root-cause analysis and corrective fixes.
- Participated in Jenkins build/release activities and automated UI testing with Selenium, Jasmine, Karma, and Protractor.

EDUCATION

Master of Science, Computer Information Systems | New England College, Henniker, NH | 2016–2018

Bachelor of Science, Computer Science | Jawaharlal Nehru Technological University, Hyderabad, India | 2014
